

To the World Leaders And to the People of the World:

Victory Over Cancer!

Dr. Rath was privileged to discover the principal mechanism of cancer control by specific micronutrients. For his exposure of the pharmaceutical investment 'business with disease' as the biggest obstacle to the prevention and elimination of diseases, he has become the focus of attacks by the global drug cartel lobby (www.wiki-rath.org).

Dr. Matthias Rath

Dr. Aleksandra Niedzwiecki

Dr. Niedzwiecki is the head of the Dr. Rath Research Institute and has

been coordinating the scientific research confirming this breakthrough

in human health.

Since the dawn of history, mankind has been haunted by a disease that has remained largely incurable – cancer.

For almost a century, this disease has been the target of an investment business – the pharmaceutical industry – that has turned this epidemic into a multi-billion dollar business.

The outcome was predictable: Today, at the beginning of the 21st Century, cancer is spreading globally; for most types of cancer the annual death rate still increases, and the skyrocketing costs are financially ruining millions of cancer patients and strangulating the economies of entire nations.

With the publication of this book, the 'Age of intoxication' by chemotherapy and radiation is being replaced by the 'Age of cellular regulation'.

This book does not claim that we have already reached the goal of victory over cancer, but paves the way to turn cancer into a manageable disease.

This book marks the end of the cancer tragedy. The natural health approaches presented in this book have been shown to block all key mechanisms that make cancer a deadly disease.
